

1)

	3	.	7	5
-	2	.	5	3
	1	.	2	2

2) a)

	⁶ 7	.	¹ 3
-	4	.	6
	2	.	7

b)

	² 3	.	¹¹ 2	¹ 1
-	1	.	4	5
	1	.	7	6

- 3) a) 1.6
 b) 3.87
 c) 15.14
 d) 4.06
- 4) £8.97

1) a) Harjot has not lined the numbers correctly. The decimal points need to be underneath each other. He needs to move the digits of the number he is subtracting one place to the right.

b)

	¹ 2	¹ 1	.	³ 4	¹ 5
-		5	.	3	6
	1	6	.	0	9

- 2) £6.25 is the amount Jagdish collected.
- 3) a) No. As the number of hundredths is smaller than the number of hundredths being subtracted, Thalia needs to exchange one tenth into ten hundredths. Therefore, there would be 11 hundredths subtract 7 hundredths leaving you with 4 hundredths.
- b) $8.51 - 3.67 = 4.84$

1) Multiple answers possible. An example is below:

$12.54 - 8.44$	$<$	$15.32 - 9.77 = 5.55$
$26.04 - 3.51$	$>$	$15.66 - 5.42 = 10.24$
$7.8 - 5.2$	$=$	$9.5 - 6.9 = 2.6$

2) Multiple answers possible. The number subtracted should be between 5.55 and 9.83 (inclusive) and contain 2 decimal places.

Some possible answers include:

$$12.34 - 5.55 = 6.79$$

$$12.34 - 9.15 = 3.19$$

$$12.34 - 6.67 = 5.67$$

3)
